

What Are Thrombosed Hemorrhoids and Their Causes?

Piles are classified into different types depending on the condition of the swollen vein. You may not know this but knowing the type of **hemorrhoid** that you are afflicted with would enable you to deal with the problem much easier and faster. Although they are mostly caused by the same thing, treatments vary. Some treatments may be very effective for particular swollen veins in the anal canal but when these treatments are used on other types, they may not have an effect on the problem at all. This is especially true with the thrombosed type. So before you participate in treatments, here is some background data concerning this condition.

What are Thrombosed Hemorrhoids?

This rectal condition is often experienced when the swollen external structures of the anal canal ruptures. You may also experience blood clot along with the rupture also. When experiencing this condition, you will see that a large mass of tissues had formed externally to your anus. Aside from the swollen appearance, you will feel that this particular lump of bulk is sensitive to any type of friction or pressure. Simple or perhaps light movements are already enough to be able to result in pain. This degree of pain can become even worse when you try to alleviate yourself.

Is the Condition Life Threatening?

Before you panic and run off to the hospital, you should first know that this problem is not fatal at all. Although its appearance may look intimidating, rest assured that it will not cause your own death. The only thing that you should worry about is the extreme pain that comes along with it. The pain can be debilitating and persistent. It is a good idea for you to first find out about the answers question "what are thrombosed hemorrhoids" so you will be aware what about the proper course of action - and to be prepared for the treatment options that you may need to try.

What Causes the Condition and the Factors that can Worsen It?

This problem does not always occur instantly; it gradually develops on the existing swollen veins on the anal region. In simple terms, you can say that this condition happens because of negligence. Ignoring pre-existing piles will only make the enlarged vein to intensify. If you constantly add stress to these veins, this will cause those veins to be able to rupture, thus leading to this condition. The same thing will happen if you do not treat the piles as soon as they appear. You should know that you are only exposing the swollen veins to different problems if you do not act quickly.

As With Any Other Situation, the Best Cure for this Would Always be Prevention

But if you are already experiencing this, then you should make some changes on your way of life and eating habits before you undergo any treatment. Otherwise, all those treatment procedures and medications would be put in order to waste. Studying the answers to "what are thrombosed hemorrhoids and their causes" is merely the beginning - you would have to start living a healthier lifestyle to prevent recurrence.
