## Losing Weight can Make Your Hemorrhoid Situation Easier

Being overweight can contribute to hemorrhoid improvement. The pressure that is on your abdomen from your excess fat and waste may increase pressure on your anal veins. Make sure your diet plan includes a lot of fiber to be able to relieve some of this pressure. As a word of caution, you should never use laxatives solely as a means of losing weight. Doing so will not help you to avoid hemorrhoids and may even exacerbate the condition.

- You are not quite ready to go yet, don't sit down on the toilet before you are ready.
- You are a bit straining the whole time you are sitting there.
- Gravity also has an effect on your hemorrhoids, so make sure you already have the urge to go when you sit down.

## Band Ligation

Band ligation is actually a process where a rubber band is placed around the base of a hemorrhoid. This cuts off the blood flow to the hemorrhoid all of which will make it shrink and eventually fall away. The band can cause some pain at first, the a doctor may be able to adjust the rigidity, or reduce the area with a local anesthetic. This is the most widely used hemorrhoid treatment procedure in the United States, and for good reason. Over 80% of patients who have gone through this procedure report that their symptoms were relieved.

- Injection - For really small hemorrhoids, a simply injection into the mucous membrane nearby can be enough to get rid of this entirely.
- The medication injected is designed to reduce the blood vessels in the hemorrhoid, causing it to shrink and eventually vanish.
- This may not be enough for large or persistent hemorrhoids, however.
